

CONFLICT MINERALS AND RESPONSIBLE SOURCING POLICY

The management of Robertson Geologging Ltd operates a Conflict Mineral and Responsible Sourcing Policy when sourcing materials and components for our products.

The majority of minerals concerned used by Robertson Geologging Ltd are found in tiny quantities in industry-standard electronic components. Robertson Geologging Ltd does not source any conflict minerals directly from mines, smelters or refiners. The vast majority of our purchases are regular electronic components and materials supplied by renowned and credible global component suppliers.

Our subcontractors have been contacted, informed of our Policy and invited to take and demonstrate the same commitment. To date, no evidence has been found to indicate that any minerals from conflict areas are present in our products.

Our products don't use batteries other than those supplied with third-party computers, which we may use to operate systems. We have a strict policy regarding the disposal of these batteries.

This Policy will be reviewed at least annually and revised as necessary to reflect changes to business activities and any changes to legislation.
